Challenges for VoIP E9-1-1

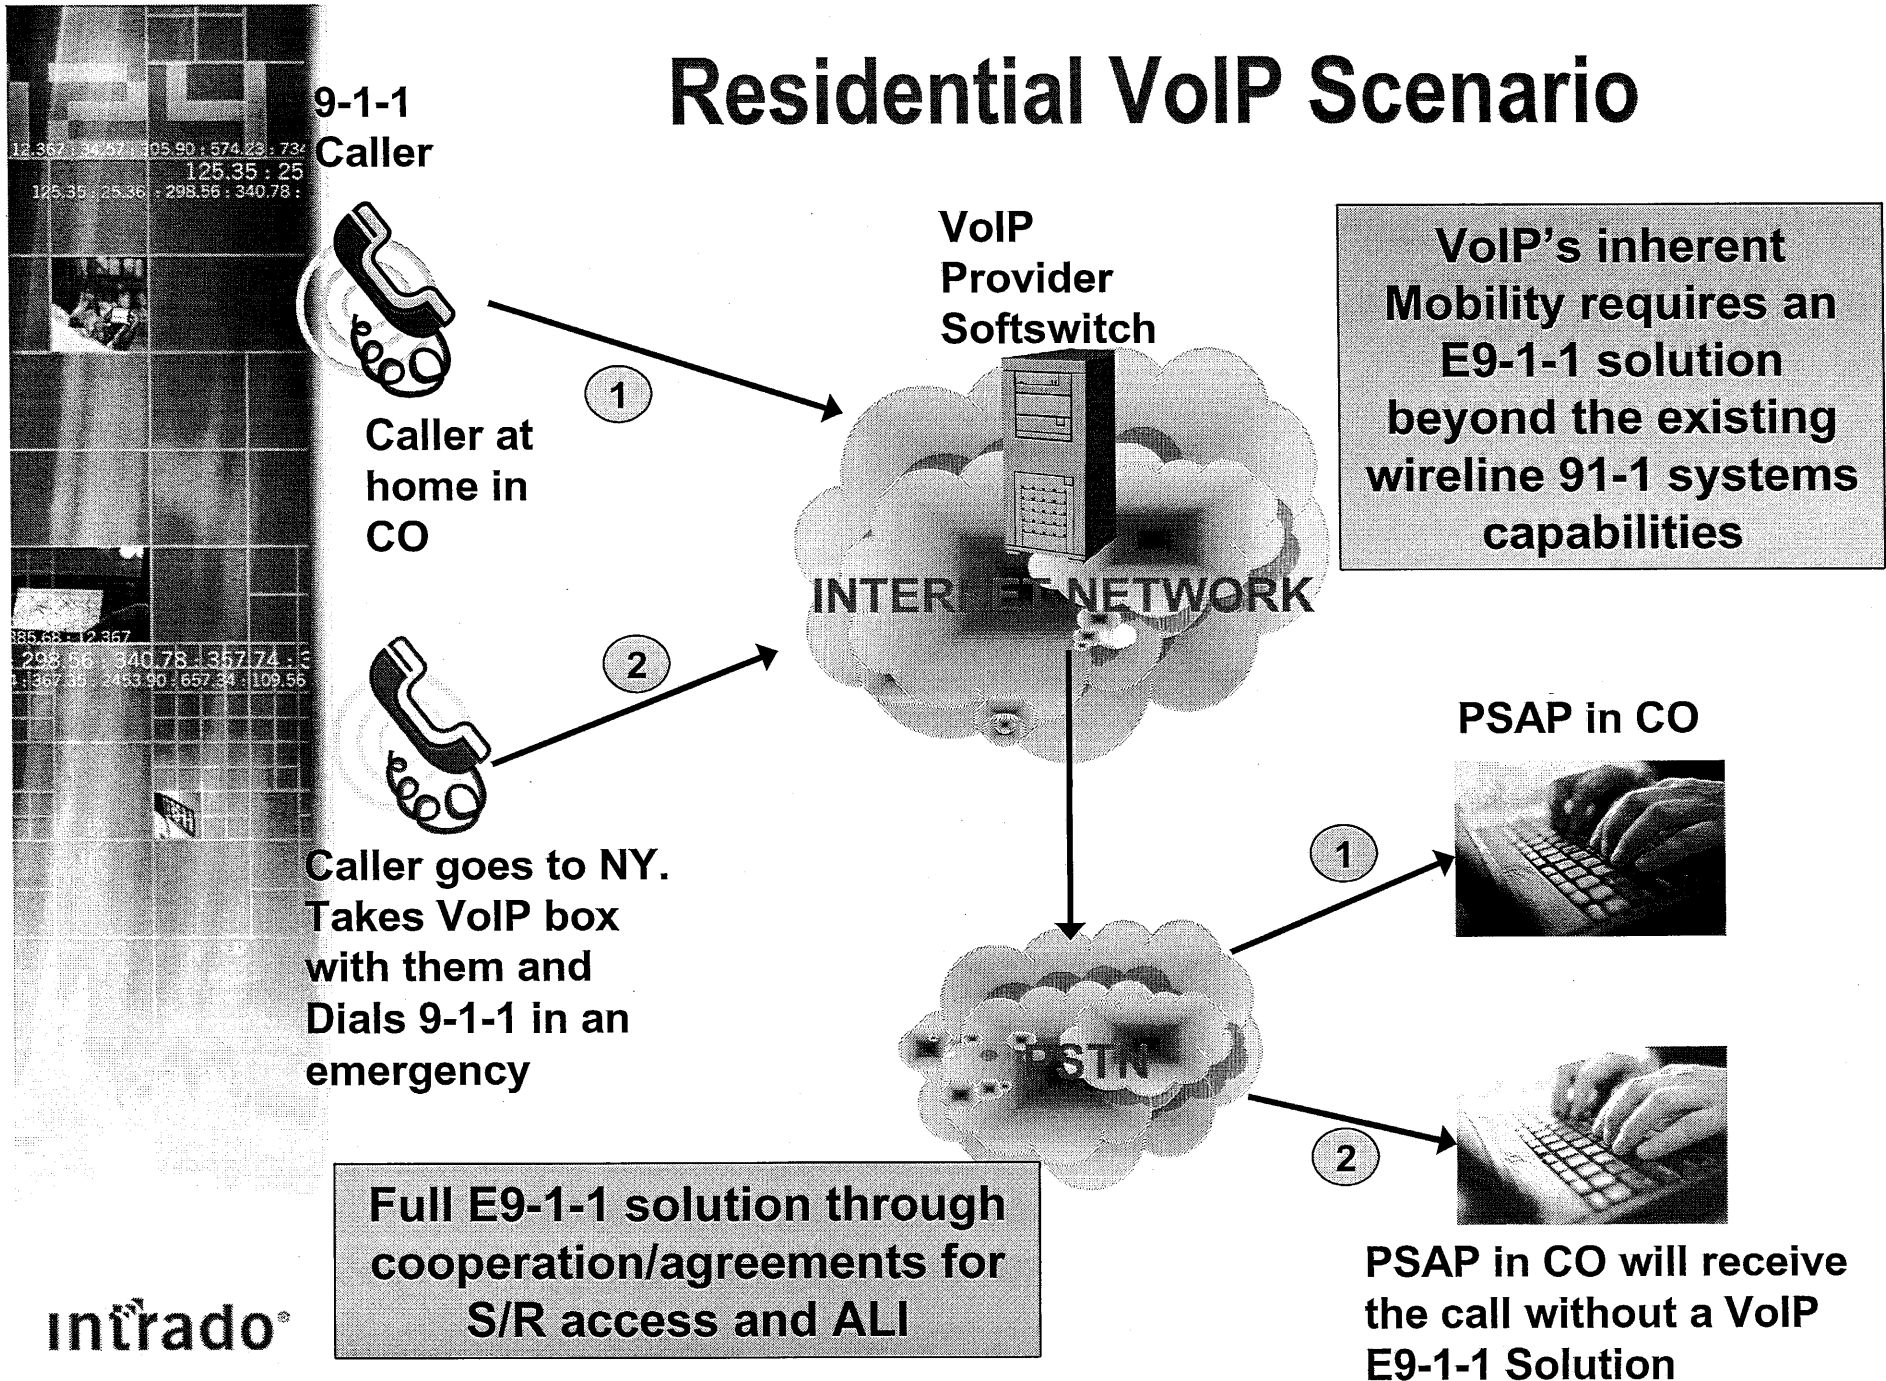

- Must solve "The Big Four" for Consumer and Business Enterprise VoIP services
 - Where is the caller?
 - Which PSAP should receive the call?
 - How to get the call to the PSAP?
 - What information to deliver with the call?

VoIP 9-1-1 Requires a Different Approach

- Technology exists to enable full E9-1-1 for VoIP subscribers regardless of movement and TN assignment
- Intrado has launched the V9-1-1 service and is currently working with partners and the industry to enable access to critical network elements required to deliver E9-1-1 for VoIP
- VoIP users deserve and expect access to E9-1-1 services equal to that of traditional wireline services

Residential VoIP Scenario

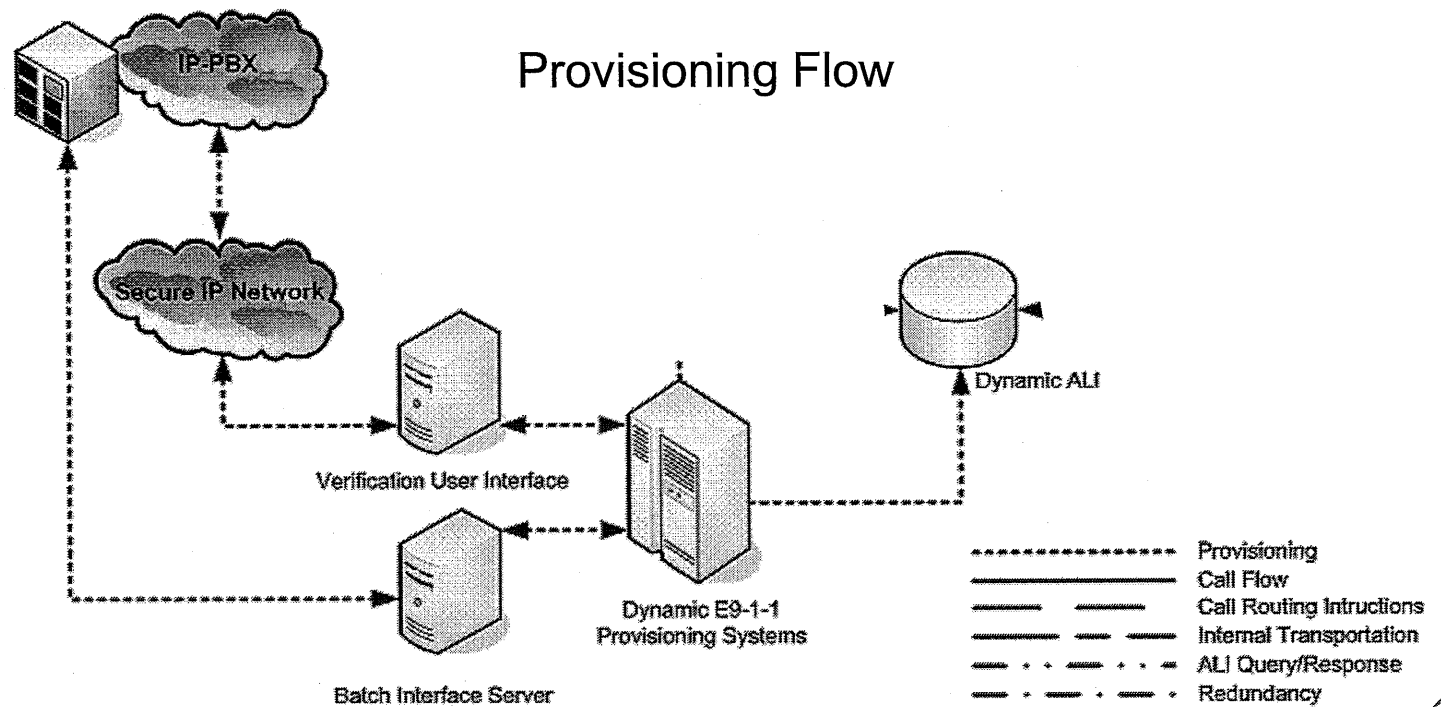

Solutions for VoIP E9-1-1

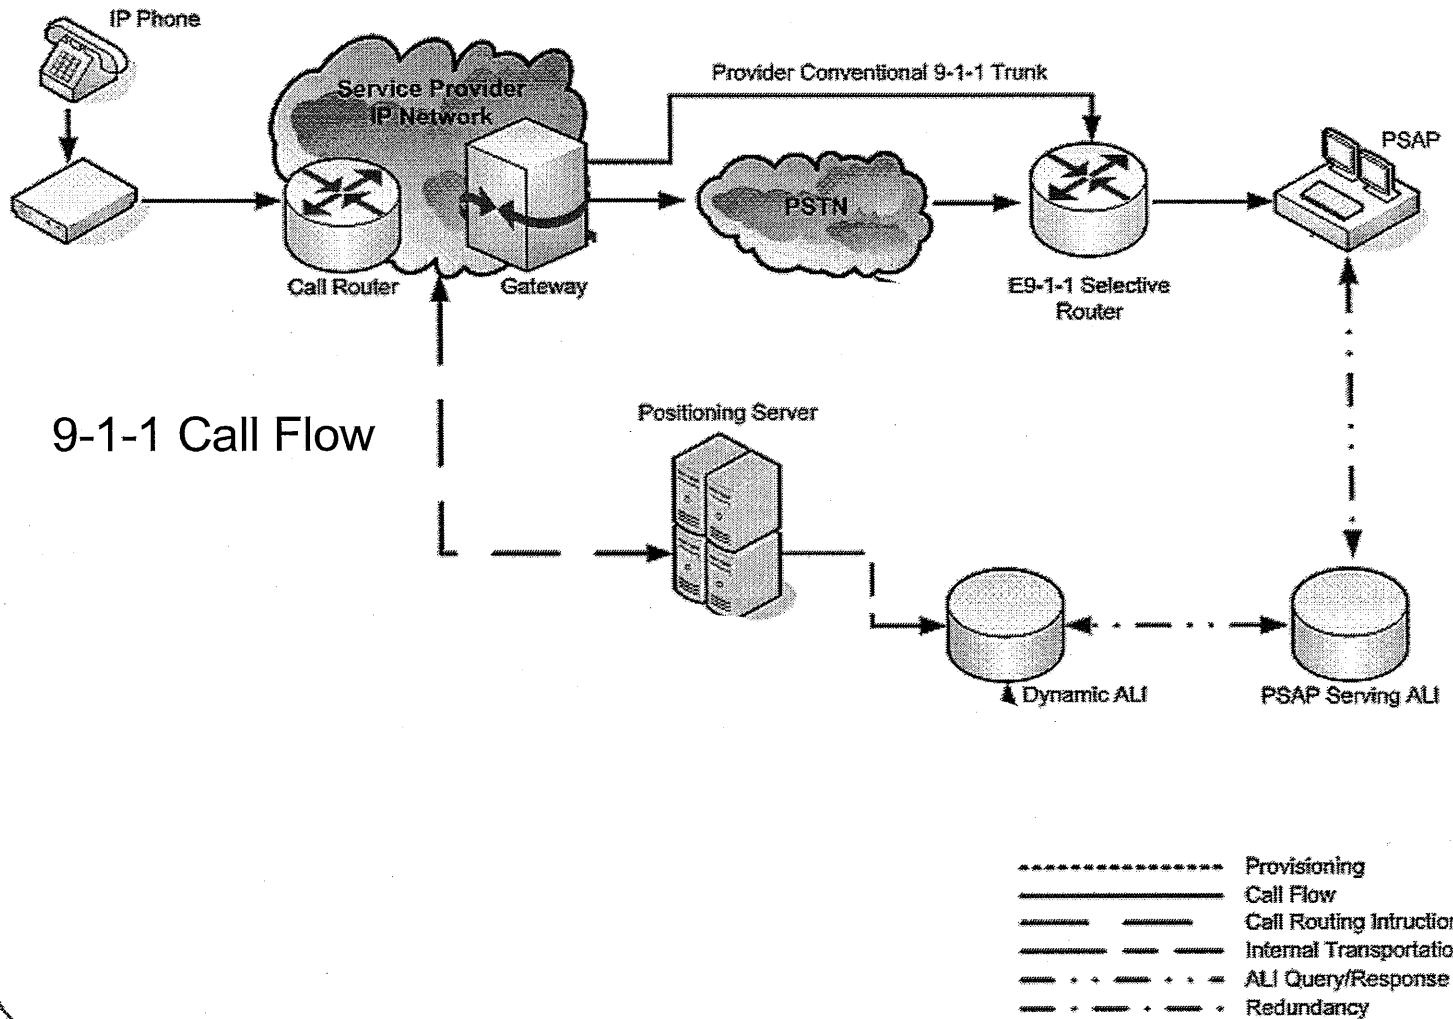

➤ Solutions depend on market offer

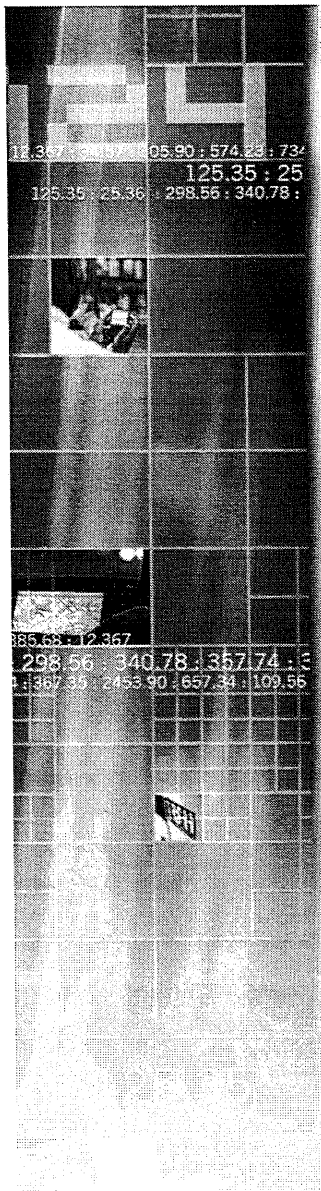

- If static user with local telephone number, existing 9-1-1 infrastructure can be used
- If mobile user or non-native telephone number assignment, need a dynamic VoIP solution

VoIP E9-1-1 For Residential & Business Users

Solutions for VoIP E9-1-1

Implementation of dynamic VoIP solution requires

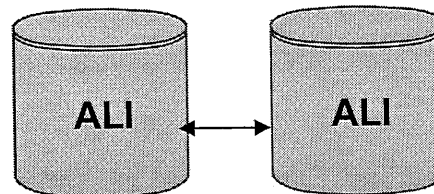

- Access to 9-1-1 Selective Routers for “native” call delivery to PSAP
- Steering of ALI (automated location information) request to VoIP Dynamic ALI for customer address information

Cooperation Enables Full Functionality of VoIP 9-1-1 Products

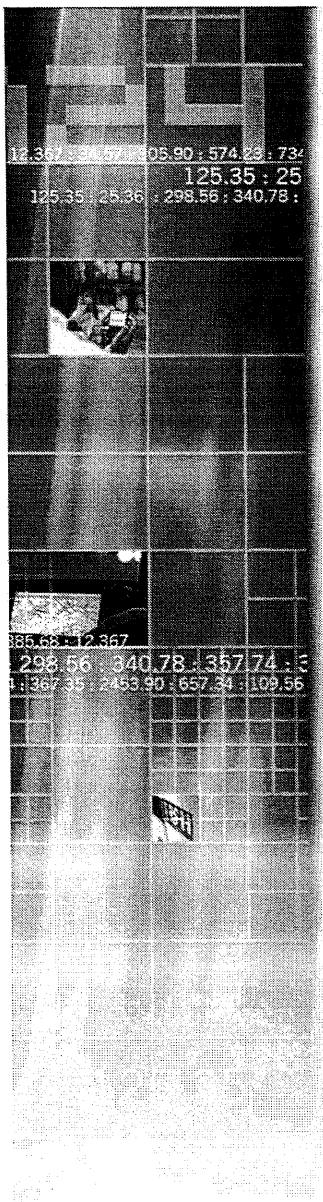

SELECTIVE ROUTER

**Access to the Selective Router is required
to enable native routing through the 9-1-1
Network**

**Access to regional ALI's required
to enable full address
presentation at the PSAP**

intrado®

Solutions for VoIP E9-1-1: Deployment Status

➤ V9-1-1 Mobility Service

- Addresses Consumer and Enterprise markets
- 7 customers

➤ States and Municipalities

- Increasingly involved in solution implementation
- Deployed VoIP native 9-1-1 delivery for Rhode Island
- Actively working with Virginia, New York City, and Seattle on native VoIP solutions

Policy Requirements

➤ 911 Network Access

- Access to the Selective Routers and ALI Steering for VoIP Service Providers; despite recent ILEC movement.
- Ensure third party concentrators of VoIP traffic are included.

➤ State 911 Programs

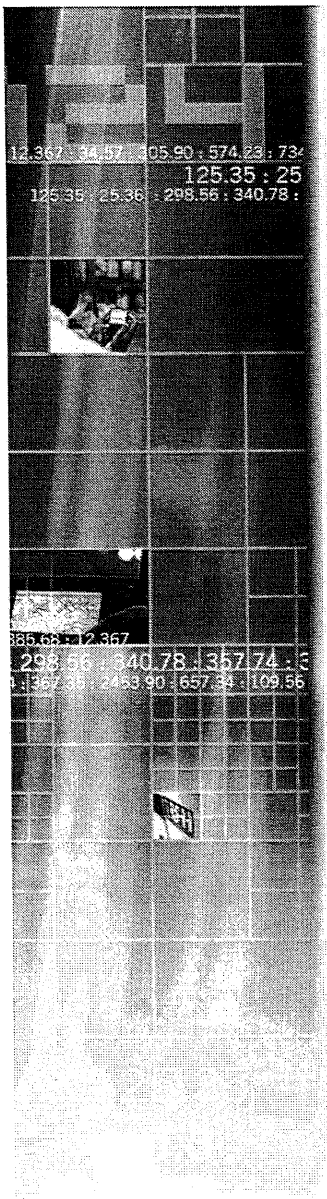

- Require VoIP providers to comply with 911 policy and service level mandates of each State.
- Define the term IP Enabled Service Provider exclusively for the purposes of 911 only.
- Ensure that providers are treated essentially the same within the States as traditional telecommunications carriers.

➤ Liability

- Provide for same liability protection afforded wireless carriers pursuant to 47 U.S.C. §615a.

➤ Standards

- Defer to existing standards organizations for technical recommendations and solutions.
